Select Section/Category

**Engineering of Functional Interfaces**

Dear EnFI2025 presenters,

Once again, *physica status solidi* and the workshop organizers are committed to publish a special issue highlighting the most exciting new results that are scheduled for presentation at this year's EnFI2025 in London, UK on 7–8 July. This will **make your important work available to a large international audience** quickly. Following a long line of successful publications from previous meetings since 2008, in collaboration with the Guest Editors and the Editorial Office we cordially invite you to contribute a **Review, Perspective** (for invited speakers) or **Research Articles** manuscript based on, or related to your presentation for publication as regular articles (no conference proceedings).

The *pss* journals are designed to reach a broad audience. It is one of the largest and well-established publication platforms in solid state, applied and device physics as well as materials science with close to 1000 articles per year – now well over **60 years** in business – and is widely accessible with many hundreds of thousands of article downloads annually.

Submitted manuscripts undergo editorial evaluation and, if considered appropriate, subsequent **peer review**. According to the editorial policy, **two positive recommendations by independent reviewers** are a prerequisite of acceptance. Peer review and publication occur rapidly on individual manuscript basis. Published in Wiley Online Library **Early View** shortly after acceptance, your article is **citable with DOI** or article number immediately.

*pss (a)* is a hybrid Open Access (OA)/subscription journal. The **Open Access** option is compliant with national or funder mandates, supported by an ever increasing number of countries and institutions. Wiley has **OA agreements**, e.g. with **Jisc in the UK**, for more details see **Wiley Author Services** and contact *pss* with questions.

If your institution or funder has no OA funds available, you may **publish your article at no costs** as subscription article with Copyright Transfer Agreement. The visibility of these articles has also been significantly improved due to many additional access licenses and publish-and-read agreements worldwide.

When all articles are complete, the topical section will be assembled in a regular monthly issue of *pss (a)*. The clustering of related articles raises the visibility of these articles significantly, and we are confident that this will become a quality publication reflected by high article access and citation numbers.

We look forward to receiving your contributions!

Steffi Krause, Patrick Wagner, Theodor Doll, Michael J. Schöning, Gaia Tomasello, and Stefan Hildebrandt

Guest Editors: Steffi Krause, Patrick Wagner, Theodor Doll, Michael J. Schöning  
pss Editors: Gaia Tomasello, Stefan Hildebrandt

## Submission information:

Please refer to the author instructions available on our homepage [www.pss-a.com](http://www.pss-a.com) → **Author Guidelines** (including optional Word template and LaTeX style files and the link to [online submission](#) through Editorial Manager - please **mention** the submission to the **EnFI2025** special issue in your cover letter and select the appropriate section/category **Engineering of Functional Interfaces** to expedite handling). Manuscripts received after the deadline may be considered for regular publication in the journal.

**Reviews** should provide an overview of a current topic in the format of a topical review of about 10–12 (max. 15) journal pages. Due to this length restriction, a complete bibliographic overview on the existing literature cannot be expected, but referencing should be well-balanced. The manuscript should represent a snapshot of most recent progress, the state of research and particularly relevant aspects, with focus on the highlights and possibly open or controversially discussed questions. They are intended to inform an audience not immediately familiar with the specific topic. Original, previously unpublished results may also be included to a certain extent.

**Perspectives** are peer-reviewed and provide a forum to present personal opinions and backgrounds on topics of interest to the research communities. They may, for example, discuss the latest developments at the forefront of science to inform non-specialist readers, debate points of controversy within a field of research, or even speculate on possible future academic and technological advancements.

**Research Articles** expose original and previously unpublished work of general interest to the community. Manuscripts do not have a strict length limit (typical lengths vary from 6 to 10 journal pages). Articles must fulfil the standards and requirements of the journal. Acceptance of a contribution for presentation at the workshop does not automatically include publication in the special issue. The main criteria for consideration by pss are:

- The importance, relevance, and novelty of the results match those expected for a regular journal paper.
- The general quality of the manuscript and the amount of information provided is appropriate for an international journal. Serial or incremental, pure self-referential and lab-report-style work is discouraged.
- Main results have not yet been published (also not in conference proceedings) and are not under consideration for publication elsewhere.

Further **benefits** for pss authors include:

- No page charges or publication costs for authors of subscription articles
- Modern article formats (PDF, Enhanced PDF, HTML compatible also with mobile devices)
- Supporting information, e.g. additional data, figures, videos or animations can be published online
- Author suggestions for journal cover figures or frontispiece pages, especially for Reviews
- High-resolution PDFs, color reprints with cover page, posters etc. are available for purchase
- pss is indexed in Web of Science and all other major abstracting databases
- Promotion of selected content via web portals, newsletters, and press releases
